Контролер за вентилатори ARCTIC Case Fan PWM Hub 1 to 10 Port

Модел : ARCTIC-AC-ACFAN00175A

Контролер за вентилатори ARCTIC Case Fan PWM Hub 1 to 10 Port

Контролер за вентилатори ARCTIC Case Fan PWM Hub 1 to 10 Port

The case fan hub can be placed freely in the housing. It is connected to your motherboard with just one cable. This means you can do without many additional cables and lay them freely in the invisible part of the housing. Your set PWM signal is passed on synchronously to all fans connected to the Case Fan Hub. The RPM of the first fan slot are read out and returned to your system. Even if you don't have enough fan headers on your mainboard, the case fan hub expands your system by 9 more case fan slots. The fans are powered directly from your power supply via SATA Power. As a result, there is no voltage loss at the fan speed and smooth, smooth operation is made possible.
